WINDOW INTERIOR

“SECRET DOOR”

- Attachments can be made to the walls. Nothing can be attached to the window beams as the building is protected.
- The space has a light track with four adjustable spotlights (not dimmable). When setting up the display, note that only objects behind the light track can be illuminated unless the exhibitor provides additional lighting. It is also important to consider that the window will have a lot of reflections from outside.
- The wooden floor can be covered if desired.
- After the exhibition, the space must be returned to its original condition. This includes, e.g., filling screw or nail holes and touch-up painting. Grafia provides exhibitors with basic tools (available for pick-up at Luonnos), materials for filling holes, and touch-up painting for wall restoration. If the exhibitor paints the entire wall in another shade for the exhibition, they must cover the paint cost themselves.
